

The `fontscale` package

A flexible interface for setting font sizes

Oliver Beery

Version 4.2.0 30 April 2025

1 Loading the package

```
% LaTeXe version 2023-11-01 added \IfExplAtLeastTF.

% Some optimizations for \__fontscalesize_hook_selectfont:
% (1) Tries to avoid computing a floating point expression by using
% \fp_set_eq:NN when the font size equals the font size of any font size
% command from \tiny to \Huge.
% (2) Prefers the primitive \if_dim:w to \dim_compare:nNnTF or \dim_case:nnTF.
% (3) Tests the font sizes roughly in order of usage rate.
% (4) The case when the font size equals that of \ normalsize is optimized
% further because it is by far the most common case.
% \f@size and \f@baselineskip are not used elsewhere in this package.
